Van Siclen, however, preferred to follow the example of the chapels at Karnak and Kuban, and suggested that for each pair of dimensions written on the ostracon, one should be considered internal and the other external. The common mathematical problems of builders of all times have always been the same: Architecture and Mathematics in Ancient Egypt of right angles, alignment of straight lines, calculation of areas to cover, volumes to remove or build, and so on. We shall see that projects and actual buildings as one would expect are the product of exactly the same culture which generated the surviving mathematical sources. CommunityReviews.
