Future changes in human well-being more likely to depend on Social Factors than Economic Factors The changes in the perception of personal well-being that could take place in the next three decades, on a global level, depend much more on social factors than on economic ones. Holling, C.

Bailey, K. This statement refers to the success of the models in predicting future well-being. Polimeni, K. However, I still maintain my view, so I have put my answers to these criticisms in a footnote.

Prosperity without Growth? A biophysical analysis of substitution: Does substitution save energy in the US forest products industry?
