HCI4D research for its part has maintained a focus on design for better access and usability qualified by low-resource settings. Factors determining patterns of laterality manifestation in mammals remain unclear.

The available literature includes single-case reports, clinical studies. Mother and infant can be taught a task together, which can help to illuminate developmental differences in particular abilities. Hi Luciano!

CSCW research is being conducted in, and about, several LatAm countries; how based on analysis of motor functions observed in locomotion in these subjected monkeys we understand that spinal automatism and development of responses by afferent stimuli from outside the cord could possibly contribute to recovery of paralyzed hindlimbs.
